

ArbitrageAI Platform — User Journey Document

Classification: Internal — Product & UX

Version: 1.0

Date: June 4, 2026

Journey 1: Onboarding — African Mobile User (Nigeria)

Persona: Emeka, 28, Lagos. Has USDT on Binance P2P. Uses WhatsApp daily. Never heard the term "API key."

Step 1: Discovery

- Channel: WhatsApp forward from a friend
- Landing: Mobile web landing page
- User sees: "Your crypto works for you while you sleep. No experience needed."
- User action: Taps "Start for free"

Step 2: Sign Up

- Method: Continue with Google (one tap)
- Backend: Firebase Auth creates account; Firestore profile: country: NG, home_currency: NGN
- Time: < 30 seconds

Step 3: Country Selection

- Emeka selects: Nigeria
- System: Auto-sets NGN, routes to Nigerian exchange options, prepares WhatsApp notification setup

Step 4: Connect Exchange — Binance Guided Wizard

- Step 1: "Open Binance" button → deep-link to Binance API Management page
- Step 2: Annotated screenshot: "Tap 'Create API' here" with arrow
- Step 3: Pre-filled label: ArbitrageAI-Emeka (one-tap copy)
- Step 4: Screenshot showing Read Information (checked), Spot Trading (checked), Withdrawals (unchecked)
- Step 5: Two input fields for API Key + Secret Key with paste buttons
- Validation: Balance check in 1.8 seconds

- Confirmation: "Connected! Your Binance balance: 250 USDT (~N375,000)"
- Time: ~3 minutes

Step 5: WhatsApp Setup

- Screen: "Get alerts on WhatsApp — it's how we'll tell you when you make money"
- Action: Button opens wa.me link with pre-filled message to ArbitrageAI bot
- Bot responds: "Welcome Emeka! Your ArbitrageAI account is connected."
- Time: < 60 seconds

Step 6: Choose Plan

- Emeka sees NGN pricing: Starter (N13,500/mo), Pro (N43,500/mo)
- "Start your 14-day free trial — no payment needed yet"
- Emeka selects: Pro trial

Step 7: Activate AI Engine

- Large "AI Engine" toggle shown in OFF state
- Copy: "Your AI will look for opportunities on Binance 24/7. It only trades when it can make a profit."
- After toggle: "Active — Scanning for opportunities"

Step 8: First Trade (Within Hours)

WhatsApp message:

"Trade Complete!

Strategy: Funding Rate

You earned: N1,840 (~\$1.22)

Time: 2 minutes

Total today: N1,840"

Step 9: Day 14 — Trial Ending

WhatsApp: "Your free trial ends in 2 days. During your trial, your AI made N28,400 (~\$18.90).

Keep earning? [Pay with bank transfer] [Pay with card]"

Emeka pays: Flutterwave bank transfer → completed in < 2 minutes

Step 10: Ongoing Active Use

- Morning: WhatsApp daily summary
- Weekly: Email performance report with NGN P&L chart
- Monthly: Notification if P&L is lower than expected

Journey 2: Onboarding — Global Retail User (USA)

Persona: Marcus, 34, Houston TX. Has Coinbase account with \$5,000. Not a developer.

Step 1-2: Discovery + Sign Up

- Channel: Twitter/X crypto influencer post
- Sign up: Continue with Google
- System: Sets country: US, home_currency: USD

Step 3: Connect Exchange — Coinbase OAuth

- Selects Coinbase → OAuth popup opens
- Coinbase screen: "ArbitrageAI would like to: View your balances and trade on your behalf. (Cannot withdraw funds.)"
- Marcus clicks: Authorize
- Backend: OAuth token stored in Secret Manager
- Confirmation: "Connected! Coinbase balance: \$5,042.18"
- Time: < 60 seconds

Step 4: Telegram Setup

- Marcus has Telegram → "Connect Telegram" button → Telegram deep-link
- Bot: "Connected! I'll alert you every time your AI makes a trade. Type /help for commands."

Step 5: Plan Selection + Activation

- Marcus selects Pro trial (\$29/mo, no card yet)
- Activates AI Engine toggle

First Telegram Alert (Within Hours)

"Trade Executed

Funding Rate Arb — Coinbase/Bybit

Net profit: +\$0.84

All-time: +\$0.84"

Ongoing Telegram Commands

- /pnl → "Today: +\$4.12 | This week: +\$18.44"
- /status → "Engine: Active | Strategies: Funding Rate (70%), Spatial (30%)"
- /pause → "Engine paused. Type /resume to restart."

Journey 3: Onboarding — South Africa (Thandi)

Persona: Thandi, 31, Cape Town. Has VALR account. Wants passive income in ZAR.

Key Differentiators

SARS AIT Step (within onboarding):

"To trade using South African Rand, you'll need a free SARS AIT pin. This takes 5 minutes on the SARS eFiling portal."

- Already have one? Enter it here.
- Don't have one yet? Skip — your AI will use USDT strategies in the meantime.

Currency: P&L displayed in ZAR with USD toggle

Tax export: SARS-compliant CSV under Settings → Tax Reports

Notifications: WhatsApp primary

Strategy: Africa P2P Premium (VALR ZAR vs. Binance premium) active for Pro tier

Journey 4: Cancellation & Retention

Trigger: User taps "Cancel Subscription"

Scenario A — Positive P&L this month:

"Before you go — your AI earned N28,400 this month.

Cancelling means your AI stops working tomorrow.

[Keep my subscription] [Cancel anyway]"

Scenario B — Zero or negative P&L:

"We're sorry the results weren't what you expected.

We'd like to give you 1 month free as a thank you.

[Accept free month] [Cancel anyway]"

Scenario C — User cancels anyway:

- Dashboard set to read-only; trade history retained 12 months
- WhatsApp/Telegram message 30 days later: "Miss earning? Reactivate in one tap."

Journey 5: Quiet Market Period

Trigger: No profitable opportunities for 48 hours

Automated WhatsApp/Telegram message:

"Market Update

Arbitrage opportunities were quieter than usual this week.

Your AI ran 3 trades with +N840 net profit.

We're watching for better conditions — your capital is safe and your engine stays active.

We'll message you the moment a good opportunity appears."

Purpose: Prevents cancellation from silence. Users understand low periods are normal.

Key Activation & Retention Metrics (PostHog)

Metric	Target
Onboarding completion rate	> 85%
Time to first exchange connection	< 4 minutes
Time to first trade	< 24 hours
Day 14 trial conversion	> 35%
Monthly churn rate	< 5%
WhatsApp notification open rate (Africa)	> 70%
Telegram command usage (Pro)	> 40% monthly
P&L-positive users	> 80% in any given month
